Available Exclusively at

Clinical Glutathione™ - The FIRST of its kind!

Glutathione Your Body's Own Antioxidant

- Reduces the Risk of Oxidative Damage*
- Defends Critical Cells from Oxidative Stress*
- Supports Nerves & Cognitive Health*
- Helps the Liver Eliminate Toxins*
- Preserves and Protects Other Crucial Antioxidants in the Body*

The Master Antioxidant

Glutathione is your body's own antioxidant. It is one of the most powerful protective substances in the body. **Did you know that after age 20, our body's ability to produce glutathione can drop up to 10% or more EACH DECADE!?**

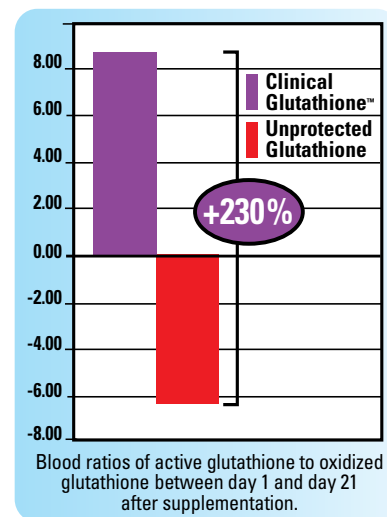

Other factors impact the levels of naturally occurring glutathione in the body, so supplementing with glutathione seems to be a natural answer to this problem. However, it is not that simple.

Glutathione has been difficult to stabilize in its active form via oral supplementation due to lack of protection from oxidation, until now. **Clinical Glutathione™ is the FIRST of its kind that has PROVEN ability to improve blood ratios by 230%.†**

Clinical Glutathione featuring Sublinthion®—A First of Its Kind

- Sublinthion is the unique, patented glutathione used in Clinical Glutathione.
- The first of its kind in the US market, Clinical Glutathione is protected using a NEW French technology to prevent oxidation of this form of glutathione.
- In a human study, Sublinthion demonstrated a 230% improvement of blood ratios†—the FIRST proven results of this type for this unique delivery system.

This is great news for patients and doctors alike, as Clinical Glutathione is a perfect way to increase levels of active reduced glutathione.

Clinical Glutathione—Supports Active Glutathione Levels

Many glutathione products promise much, but don't deliver. In just 11 days during a clinical study, Clinical Glutathione was shown to increase active glutathione in the bloodstream by 38 points. Unprotected glutathione actually reduced the active amount by 40 points. That's a 78 point difference between the two groups!

9 Reasons You Need Clinical Glutathione™

Supporting glutathione levels can be challenging. Unprotected glutathione becomes oxidized quickly, and oxidized glutathione is not beneficial. In fact, it can add to the potentially harmful oxidative stress burden you're already fighting. N-acetylcysteine (NAC), a glutathione precursor, can be used to increase glutathione production. However, because your body's ability to make glutathione from NAC varies significantly by age and health status, you can't consistently rely on it. In a clinical study, Clinical Glutathione increased the glutathione ratio 65% better than NAC.

Clinical Glutathione Is Different.

1

It Delivers

Protected by a patented process, the slow-melt tablet assures you're getting more of this beneficial compound.

2

Backed by Research

Human studies show that this formulation supports active glutathione levels in a way that NAC and unprotected glutathione can't.*

3

Improves Ratios of Glutathione by 230%†

Clinical Glutathione removes the uncertainty of using other, less stable forms.*

4

Rapid Results

Clinical studies show significant blood level improvement in only 11 days.*

5

Helps You Detoxify

Glutathione is required for all liver detoxification. The proper levels of this crucial compound support healthy liver function and detoxification.*

6

Defends Critical Cells from Oxidative Stress

Glutathione levels are key to the proper function and life of every cell in your body.*

7

Supports the Nerves and Clear Thinking

The brain and nervous system are especially prone to oxidative stress. Glutathione helps support optimal brain cell activity.*

8

Is the Body's "Master Antioxidant"

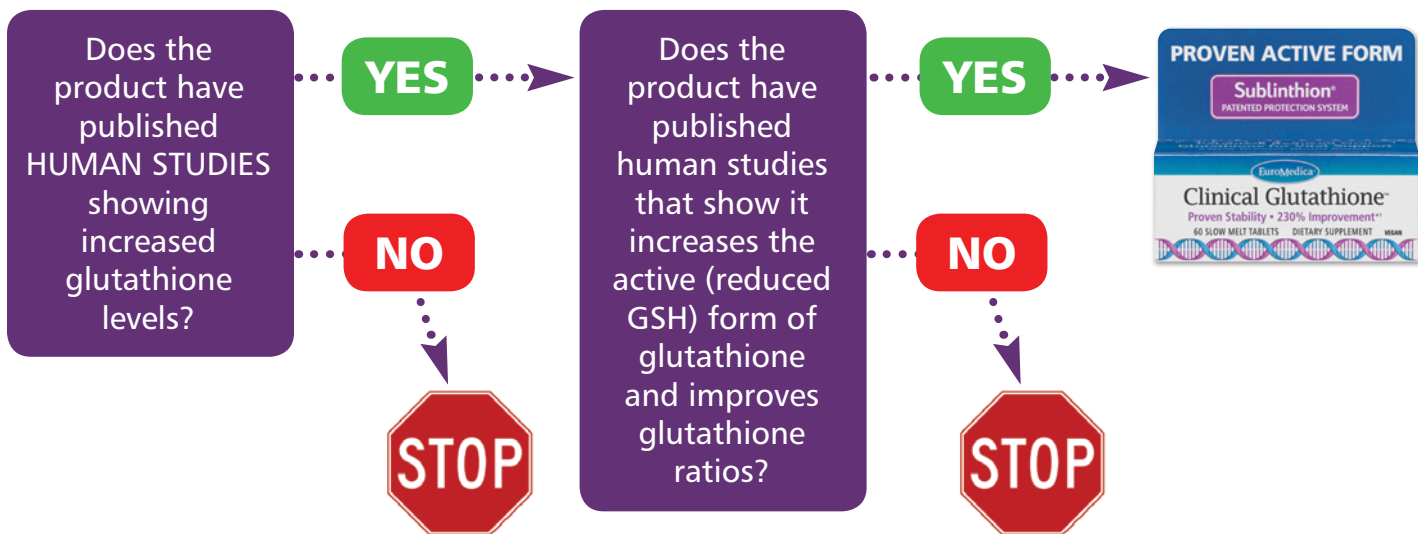

Glutathione is your primary protection from the risk of oxidative damage that affects your health.*

9

Keeps Antioxidants Active Longer

Glutathione preserves the strength of other antioxidants, so your healthy diet and supplement regimen is even more beneficial.*

How Does Clinical Glutathione™ Compare?

Slow Melt Technology

Clinical Glutathione is a powerful supplement. However, to obtain optimal results, **let the tablet melt in your mouth for 15-30 minutes**. Some suggestions for when it is easiest to use:

- During your morning shower
- On your way to work
- While you exercise
- Before bed

Unlike other supplements, **Clinical Glutathione works best when used alone. Do not eat or drink while it is in your mouth. Just pop it in your mouth and relax!**

Get the Most from Your Clinical Glutathione

For optimal absorption, allow the slow-melt tablet to dissolve in your mouth before swallowing.

To get the most benefits from your Clinical Glutathione, do not eat or drink for 15 minutes after it has dissolved.

60 slow melt tablets #E73706

2 tablets = 300 mg (reduced form) L-Glutathione
