# Recommend Nerve Complex™ from EuroMedica®

The Professional Choice  
for Nerve Support\*

If your patients think they don't have any options for nerve support, you can steer them in the right direction: Nerve Complex.\*

Included in a daily regimen, Nerve Complex supports:

Healthy nerve  
function—especially in  
the feet and hands\*

Proper circulation†

Healthy blood sugar  
metabolism††

The key to Nerve Complex is that it delivers critical ingredients at dosage levels that matter, including:

## Bioactive B Vitamins:

Vitamin B6 as P-5-P and vitamin B12 as methylcobalamin are crucial nutrients in readily bioavailable forms that support healthy blood sugar levels already within normal range, carbohydrate metabolism, and healthy nervous system structure and response.\*

## Chromium and Zinc:

These minerals support proper insulin response plus healthy tissue formation and maintenance, both key factors for healthy nerve function in the feet and hands.\* Both minerals are included in glycinate chelate forms for efficient absorption and enhanced efficacy. This chelate bond between the minerals and the ligand molecule structure helps the body absorb them during digestion. The amino acid glycine is an excellent molecule to shepherd minerals through the intestinal wall because it is so small that it can be transported readily into the cells of the body. The chromium and zinc in this formula use The Real Amino Acid Chelate System, known as TRAACS™.

## Benfotiamine:

Benfotiamine, the fat-soluble form of thiamin (B1), raises levels in the

blood up to five times higher, and maintains them significantly longer, than water-soluble B1.\*

## Alpha Lipoic Acid:

Supports levels of glutathione, one of the body's free radical fighters to keep nerve tissue healthy and functioning properly. Clinical studies have shown that use of supplemental alpha lipoic acid can support healthy blood sugar levels† and nerve health.\*

## BOS-10® Boswellia:

While boswellia, also known as frankincense, has been a valued herb in traditional practice for centuries, it's full potential has only recently been addressed by focusing on the actions of some its most valuable compounds. BOS-10 boswellia is uniquely standardized to deliver increased levels of its key compound AKBA (acetyl-11-keto-beta-boswellic acid), unlike other boswellia extracts, which may have as little as 1% of this beneficial compound. Additionally, BOS-10 contains virtually no beta-boswellic acid, which can interfere with the beneficial activity of AKBA. And those are major differences that your patients can feel for results they'll appreciate.\*

When your patients are looking for ways to maintain the health of their nerves and feet, it can be a challenge. With Nerve Complex, that challenge has been accepted.\*
